

In the Specification:

Please amend the Specification as follows.

Figure 31: LHR signaling of analogs in which a truncated hCG β -subunit carboxyterminal tail was used to add a knob to β -subunit residues 98 or 99.

Figure ~~31~~ 32: LHR signaling of analogs showing the influence of the tail on adding a knob to hCG β -subunit residue 95 and on an analog lacking the ability to glycosylate the α -subunit at residue 52.

Figure ~~32~~ 33: Cyclic AMP response to crosslinked analogs.
